

McAllister Mills Inc. manufactures fiberglass dry stitched tadpole tape to meet various service conditions. The jacket is woven fiberglass with a core of either dense knitted fiberglass rope or Inconel Mesh. Edges are stitched together forming the tail structure.

This product provides effective sealing on light metal flanges or where limited bolting force is available. Because of their softness and conformability they are especially suited for applications where closures rest on the bulb of the packing.

Fiberglass material resists most acids, alkalis and solvents.

Bulb Diameters 3/8" and up.

Services Temperatures to 1000°F.
