TC1200 meets the demand for a more advanced coating than traditional low temperature coatings such as acrylic and silicone, and also offers more functionality than vermiculite. TC1200 sets a new benchmark in high temperature performance, durability and protection. TC1200 resists mark-off, abrasion and loss of color at temperature unlike other surface coated products. Available in standard colors of black, blue, red, silver and yellow the shades stay true to 1200°F. Minimum order quantities may apply. (Other colors available upon request)

**Base Material:** Texturized E-Glass  
**Weave:** Plain  
**Thickness:** 0.047” (+/- 10%)  
**Width:** ½” - 6” Standard  
**Roll Length:** 100 feet  
**Service Temperature:** 1200°F  
**Applications:** Motorsports, Military, hot metal fabrication, foundries, industrial processes and color coding critical high temperature end uses.
