WEIGHT: 32 oz/yd2 (1100 grams/m2)
THICKNESS: .065”
FIBER: Amorphous Silica
TREATMENT: Preshrunk
WEAVE: Plain
WIDTH: 40”
ROLL LENGTH: 50 yards
SERVICE TEMPERATURE: 2000 F.
SHrinkage: Less than 2%

One of the most durable high temperature fabrics on the market today for resistance to over 2000 F (1100 C). Fabrics are manufactured from continuous filament amorphous silica yarns then texturized to add volume and a proprietary abrasion resistant finish added. Fabrics are heat treated. Applications include Expansion Joints, Heat Shields, Insulation Pads, Oven/Furnace Door Seals, Furnace Curtains, etc. This product is not manufactured from leached fiberglass fabric.
